World Leader in Nuclear and Chemical Process Safety Fauske & Associates Continues Excellent Safety Record - 16 Years Without Lost-Time Injury

Burr Ridge, IL-

Since 1992, Westinghouse subsidiary and world leader in Nuclear and Chemical Process Safety, Fauske & Associates (FAI) LLC in Burr Ridge, IL, has worked safely for 5,800 days (or 16 years) without a lost-time or restricted duty injury and without a U.S. Occupational Safety and Health Administration recordable (OSHA-recordable) case.

“I attribute this successful safety record to our belief that one injury is too many, and all incidents are preventable,” said Hans Fauske, DSc, FAI’s president. “I am especially proud of this record, since a significant portion of our services and products to the chemical and nuclear industries entail experimental and laboratory activities...I believe this would not be possible without making employee safety ‘priority one’”.

Hans believes that FAI’s demonstrated safety culture, which stresses an accident-free working environment for its own employees, has had a direct impact on the kind of services they have provided to their many valued customers over the years. “The most effective way to eliminate incidents from occurring is to provide services and products that can give employees the skill and knowledge to decide for themselves what is safe, which is the best way to promote safety awareness and make safety second nature,” he said.

FAI, which was founded in 1980 by Hans and Robert Henry, PhD, became a wholly owned, independently operated subsidiary of Westinghouse Electric Co. in 1986. This international engineering consulting firm has more than 45 employees at two facilities located 16 miles west of Chicago, Ill.

FAI is recognized in the nuclear industry for its expertise in modeling severe accident phenomena and conducting comprehensive plant evaluations. FAI's Nuclear Systems Group helps its customers enhance the availability and reliability of their operating plants while maintaining regulatory compliance, extending plant life and reducing operation and maintenance costs.

"I congratulate every FAI employee for placing safety at the forefront of operations and for maintaining a stellar safety record," said Nick Liparulo, senior vice president, Westinghouse Nuclear Services. "Westinghouse is proud that FAI has accomplished this extraordinary achievement."
