Collecting Dust Samples

1. Fill out sample form
2. Collect a representative sample near equipment or in collector
3. Put sample in the Fauske & Associates, LLC bottle and label

Ensure that you are sending enough material (see 2a att. for guidelines)

Shipping Sample

4. Put MSDS, PO, Sample Form & sample in box
5. Ship per regulation
6. We will contact you when we receive your dust sample

630-323-8750
2a Guidelines to ensure that you are sending enough material for testing

Is the sample light and/or fluffy?
If so, you will have to collect a larger VOLUME in order to have enough based on WEIGHT.

Are you collecting a sample in a jar or other container?
Be sure that you take the weight of that container into account when weighing the material.

Did you select Item 1.0 - Particle Size Reduction?
If so, please send at least 50% additional material. (There is always a loss of usable material that results from the grinding/sieving process)
